

## TP 3 – Graphics

This lab requires the use of two external modules, libraries, which are not included in the distribution python standard: matplotlib and numpy.

There are several ways to install these modules:

- Install a distribution enriched with python containing these additional modules like anaconda:

<https://anaconda.org/conda-forge/matplotlib>

<https://anaconda.org/conda-forge/numpy>

- Use the pip3 command line utility by entering in a console:

```
pip3 install matplotlib
```

```
pip3 install numpy
```

Please open and run three different Session Example codes.
